

REMARKS

Claims 1-11 have been objected to due to informalities. Claims 1 and 9 have been amended to obviate the Examiner's objections.

Claim 9 has been rejected to under 35 U.S.C. §112, first paragraph as failing to comply with the written description requirement.

The Examiner's rejection is respectfully traversed.

In the specification, it states that to make the mixture thixotropic, CARBOSIL[®] can be utilized. CARBOSIL[®] is used in granulometries ranging from 6 mesh to 60 mesh as a function of polishing phases. It is composed of carbon and corundum, the latter oven-heated at a temperature of 2000°C. Its chemical formula is $\text{SiO}_2 + 3\text{C} = \text{SiC} + 2\text{CO}$. CARBOSIL[®] may be purchased from SAMAC in Assago (Milan, Italy).

Claims 1-11 have been rejected under 35 U.S.C. §112, second paragraph, as being indefinite.

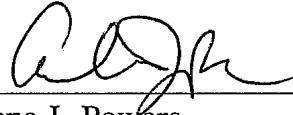

TEXOS[®] is a basic epoxy resin, a concentration of resin B21OW. TEXOS[®] B21OW is an epoxidic resin with poly-sulphuric polymers.

In view of the foregoing, it is believed that the amended claims and the claims dependent there from are in proper form. Thus, claims 1-11, are considered to be patently distinguishable over the prior art of record and should be allowed.

The application is now considered to be in condition for allowance, and an early indication of same is earnestly solicited.

The Commissioner is authorized to charge Deposit Order Account No. 19-0079 for any fees that may be required.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'A. J. Powers', is positioned above a horizontal line.
